

FlatFix

FLATFIX® COMPACT RAIL FASTENING

FlatFix is a low-profile solution for tight spaces or short circuit risks, fitting NS90/B70/B90 and W mounting sleepers. It uses a Torx bolt for easy installation and is certified by Dekra Rail, meeting EU standards. Suitable for special track constructions.

PROBLEM

Situations arise in the railway where there is insufficient space for common rail clips or where there is a risk of short-circuiting rails causing signalling problems. FlatFix provides a solution that can be applied in areas such as insulated-rail-joints, expansion joints or shunting systems at marshalling yards.

APPLICATION

The compact FlatFix attachment fits NS90/B70/B90 and all other sleepers suitable for W fastenings. The low-profile clamping plate is fixed with a countersunk Torx bolt so that even the tools are not hindered when mounting or dismantling the clamp. FlatFix has been applied on more than 20 km of track.

CERTIFICATION

FlatFix is tested and certified by Dekra Rail and meets the international requirements for rail fastenings.

FEATURES

- Low installation height
- Tested and certified
- Complies with EU # 1299/2014 (TSI), EN13146 and EN 13481
- High corrosion resistance
- Applicable to special track work such as IRJ, expansion joints and shunting systems
